

Assignment for UI Candidates

Time duration to complete the assignment: 7 calendar days

Design a simple working web application that is **visually appealing**.

Two types of users can use your application

- doctors and
- patients.

You should preload some dummy users in your database. Do not create a registration page.

Doctors

- Once they login to the application, the system detects that they are a doctor
- Is shown details about one patient - name, age, address

Patients

- Once they login to the application, the system detects that they are a patient
- They are provided a page where they can upload one or more files from their desktop to the system.

The system should store the uploaded files on the file system.

Some of the technologies that we are looking for:

- Node.js
- Angular
- ReactJS
- CSS/HTML5
- Visual layouts like bootstrap or materialize

Be ready to describe your application when you come onsite.
